Knockout/Knockdown Validated Antibodies

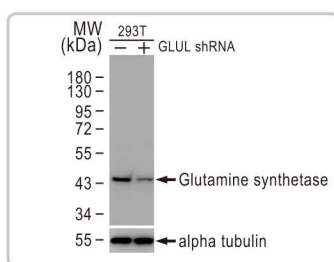

Компания GeneTex внедряет новый способ тестирования (валидации) антител. Как известно, антитела являются важным инструментом для фундаментальных и клинических исследований. Регулярное подтверждение специфичности и изменчивости антител - это своевременное и закономерное требование научного сообщества и регулирующих организаций. Новым способом тестирования (валидации) антител является использование механизмов блокирования синтеза белка-мишени (механизмы нокаут/нокдаун) с помощью РНК-интерференции и CRISPR-опосредованных технологий. В поддержку этой задачи, GeneTex вводит в качестве нормы проверки (валидацию) качества антител, основанную на механизме нокадауна проверку в качестве основного компонента обеспечения. На сегодняшний день проведена оценка более двухсот наиболее популярных продуктов и компания намерена усилить свои действия в данной области в будущем.
